Sightbridge: where AI creates leverage first

Hashir · AI Engineering Lead take-home · public sources only. Fact = from public sources; View = my recommendation.

1. What Sightbridge does, and for whom

Fact. Sightbridge Capital Partners (Santa Monica) launched publicly in June 2026 as an "institutional real estate platform built around tax-advantaged programs" for the U.S. private wealth channel. It is starting with 1031 Delaware Statutory Trust (DST) programs, including a DST-to-721 UPREIT path; Qualified Opportunity Zone strategies are expected to follow. Programs are built with institutional owner-operators and distributed through financial advisors to investors deferring capital gains.

The leaders come from institutional real estate distribution:

- **Jay Frank (CEO):** formerly President/COO/Head of Distribution at Cantor Fitzgerald Asset Management.
- **Steve Rokoszewski (COO):** founded Anchor Advisory Services, acquired by Praxis in 2024.
- **Kamil Poltorak (Real Estate):** formerly at Cantor; helped structure 40+ offerings.

In September 2026 it hired two Managing Directors of Private Wealth, ahead of its first programs.

View. Sightbridge is a sponsor and distributor whose product is trust. Programs are complex, illiquid and sold through intermediaries, so speed and accuracy of information decide shelf space.

2. Who it needs to win over

1. **Broker-dealer and RIA home offices and due-diligence teams.** They approve products onto platforms. Without selling agreements there is no distribution. *(Fact: one MD covers "national accounts, platform relationships and home office due diligence".)*
2. **Financial advisors.** They choose between competing DST sponsors for clients facing 45/180-day 1031 deadlines. They need fast, correct, compliant answers.
3. **Platforms and third-party due-diligence providers.** Their reports and listings shape advisor perception at scale.
4. **Institutional owner-operators and lenders.** They supply the properties and must trust Sightbridge's execution.
5. **Adjacent influencers.** Qualified intermediaries, CPAs and estate attorneys sit at the moment a gain is realised.

3. Where AI creates the most leverage in 90 days

View. Sightbridge's constraint is a small distribution team facing a large number of advisors and home offices, while answering the same questions from first principles. Leverage comes from making approved knowledge instantly reusable, never from AI giving advice.

Build first: a cited, compliance-reviewed knowledge assistant over approved materials. Advisor Q&A and due-diligence questionnaire (DDQ) drafting share one engine. This take-home is its skeleton: answers only from approved sources, verified citations, deterministic refusals of personalised advice, and an audit log for supervision.

Days	Deliverable	Success measure
0–30	Load approved PPMs, offering docs and FAQs; internal-only assistant for the private wealth and operations team; 50-question eval set signed off by compliance	≥90% of eval answers correct and cited; zero uncited claims
31–60	DDQ drafting: first-draft answers from the same library, always reviewed by a human; gap report of questions the library can't answer	DDQ turnaround time halved; gaps closed weekly
61–90	Pilot with 10–20 advisors through wholesalers; weekly review of audit log and refusals	Repeat usage; fewer repetitive inbound questions; no compliance exceptions

Not first: personalised suitability, investor-facing chat or autonomous outreach. All carry FINRA/SEC communications risk that outweighs early value.
